

Auth0 & Managed Identity Provider (IdP) Integration Guide

Universal Single Sign-On (SSO), Social Auth & Session Management Architecture

Sovereign Entanglement Asset Systems (SEAS) | Verified: July 26, 2026

1. Auth0 vs Custom Auth Implementation Comparison

Authentication Component	Custom Auth (Previous)	Auth0 / Supabase Managed Auth	Business & Operational Advantage
Connection Reliability	Fails if API server is offline ('Failed to fetch')	100% Uptime Global Edge Auth0 Cloud	Zero connection drops; smooth user sign-in anytime.
Social Sign-On	Manual OAuth code implementation required	One-Click Google, GitHub & Apple OAuth	High conversion; users sign in with existing accounts.
Password Security	Local password hashing management required	SOC 2 Type II & ISO 27001 Certified IdP	Zero liability; Auth0 secures user passwords natively.
Session & JWT Tokens	Custom localStorage handling	Automatic JWT Token Refresh & Storage	Secure token management across all 7 domain apps.

2. Step-by-Step Auth0 Tenant Setup for 7 Ventures

Step 1 (Create Free Auth0 Account): Go to <https://auth0.com/> and create a free account.

Step 2 (Create Single Page App): Under Auth0 Dashboard -> Applications -> Create Application, select *Single Page Web Application*.

Step 3 (Configure Allowed Callback URLs): Enter all 7 domain URLs in Allowed Callback URLs and Allowed Web Origins:

<https://aetherquant.cloud>, <https://shieldaudit.digital>, <https://leadnexus.business>, <https://copyflow.cloud>, <https://eminencecore.com>, <https://devpulse.live>, <https://nichestack.online>

Step 4 (Include Auth0 SPA SDK): Add `` to your website header to handle sign-ins in 1 line of code!
