

Google Ads API Internal Tool Design & Architecture Document

Eminence Core Solutions — Internal Campaign Management Engine

Developer Contact: santiago@eminencecore.com | Verified: July 26, 2026

1. System Overview & Scope

Eminence Core Solutions has developed an internal Python-based campaign management tool using the official `google-ads` Python SDK. The system operates strictly internally to manage advertising campaigns for our owned digital properties (eminencecore.com, aetherquant.cloud, shieldaudit.digital, leadnexus.business).

2. Technical Architecture & Component Mapping

Component	Technical Specification	Google Ads API Service Used
Campaign Manager	Creates & updates Search campaigns, ad groups, and keywords	`CampaignService`, `AdGroupService`, `AdGroupCriterionService`
Ad Creator	Generates responsive search ads (RSAs) for proprietary services	`AdGroupAdService`
Reporting Engine	Pulls daily impressions, clicks, CTR, CPC, and conversion stats	`GoogleAdsService.SearchStream`
Budget Pacer	Adjusts keyword bids & daily campaign budget caps automatically	`CampaignBudgetService`

3. Data Privacy & Security Standards

All API OAuth2 credentials (Client ID, Client Secret, Refresh Token) and Developer Tokens are encrypted using AES-256 and stored in secure environment variables. Access is strictly restricted to internal Eminence developers. No third-party access is provided.
