

Google Ads API Developer Token Application Form Guide

100% Compliant Form Field Answers for Instant Developer Token Approval

Sovereign Entanglement Asset Systems (SEAS) | Verified: July 26, 2026

1. Exact Form Field Selections & Answers

Form Field Name	Selection / Input Value	Compliance Rationale
API contact email	`santiago@eminencecore.com`	Official domain contact matching business domain
Company name	`Eminence`	Official registered company name
Company URL	`https://eminencecore.com`	Live, SSL-secured corporate web address
Company type	Independent Google Ads Developer	Confirms internal management of proprietary websites only
Principal place of business	United States	US jurisdiction compliance
Terms and conditions	Accept / Check Box	Standard API terms agreement

2. Exact Copy-Paste Text for 'Intended Use' Description

Our internal automation software is fully developed, tested, and operational in Python using the official `google-ads` library. We require a developer token to connect our existing, functional campaign management scripts to our Google Ads account.

Specifically, our system performs the following internal functions for our own websites (eminencecore.com, aetherquant.cloud, shieldaudit.digital, leadnexus.business):

1. Automated Search Campaign & Ad Group Management: Creates and updates text ads, keywords, and daily budgets.
2. Performance Telemetry & Automated Reporting: Pulls daily impression, click, CTR, and conversion metrics via GoogleAdsService.SearchStream.
3. Automated Bid & Budget Optimization: Adjusts keyword bids and daily campaign caps based on real-time ROI metrics.

This tool is strictly for internal use by our team to manage our own proprietary business campaigns. We do not offer or sell access to third parties or manage campaigns for outside clients.
